

PerimeterX

Keep Your Digital Business Safe

In today's digital world, your website and your web applications are the front door to your company. They represent your brand, drive your business and play key roles in your overall success. While you work to grow your digital business, you also need to safeguard it from a wide variety of automated attacks. These serious digital threats include: account takeover, ad injections, browser extensions, carding, Magecart, PII harvesting, scalping, skimming and scraping. Leading enterprises and born-on-the-web businesses rely on PerimeterX to detect these risks and proactively manage them, so they can focus on growth and innovation. Bringing together an elite engineering team and best-in-class customer enablement and support, PerimeterX has become the go-to partner for safeguarding digital experiences on the modern web.

PerimeterX solutions identify and stop automated attacks before they affect your websites, web applications or APIs. This reduces your risk, protects your users and partners, and safeguards your proprietary content and information. We use machine learning to generate a constantly updated library of attack patterns based on interactions with applications, fingerprints from devices and network characteristics. Unlike other solutions, PerimeterX takes a platform approach to protect you against new threats not previously seen - a key differentiator from solutions that rely on dated, historical attack signatures and static profiles.

PerimeterX Solutions

PerimeterX Bot Defender is a behavior-based bot management solution that protects your websites, mobile applications and APIs from automated attacks, safeguarding your online revenue, competitive edge and brand reputation. Bot Defender provides the world's largest digital businesses best-in-class bot protection based on behavioral analytics, advanced machine learning techniques, predictive models and security research to block a wide range of automated attacks, preserving page load performance, and optimizing security resources and infrastructure costs.

PerimeterX Code Defender is a comprehensive client-side application security solution that protects your website from digital skimming, formjacking and Magecart attacks. It uses behavioral analysis and advanced machine learning to automatically detect vulnerable scripts, suspicious PII access and data leakage from your users' browsers. With Code Defender, you can reduce the risk of data breaches and compliance penalties while improving your operational efficiency.

PerimeterX Gives Customers the Power to:

Reduce Risk and Achieve Compliance

Protect Online Revenue

Improve Operational Efficiency

PerimeterX

PerimeterX Page Defender is a browser malware protection solution that preserves the intended online user experience by blocking distractions that come from unwanted browser extensions and ad injections. Eliminating these distractions means you can prevent your site visitors from getting redirected to competitors, hide unauthorized content from being shown on your site and reduce affiliate fraud. With Page Defender, you can take back control of the users' experience, protect your brand reputation, and keep users on the path to purchase.

The PerimeterX platform is a set of cloud-native infrastructure and services that powers an award-winning suite of application protection solutions. PerimeterX Bot Defender, PerimeterX Code Defender and PerimeterX Page Defender protect online businesses against automated attacks and client-side threats. By using a single, easy to deploy client-side Sensor along with a cloud-based Detector and an Enforcer that integrates with a wide range of server side and edge technologies, you can preserve your existing architecture without impacting user experience. The intuitive Portal enables your operations team to investigate and mitigate multiple threats and greatly improves their operational efficiency.

PerimeterX Services and Support solutions offer fast deployment and function as an extension of your team to provide proactive, best-in-class service and around-the-clock security analyst oversight. You benefit from proactive threat management with a dedicated Security Operations Center (SOC), delivered in real-time through your preferred communication channels such as phone, email or Slack.
