

PerimeterX Bot Defender

Secure Your Website, Mobile Applications and APIs from Automated Bot Attacks

More than 50% of the traffic to websites overall comes from bots and they represent between 40% and 80% of login attempts. Automated traffic on your website includes both - bots that are considered beneficial, such as search engine crawlers, and unwanted malicious bots. The largest portion of the automated traffic comes from the

malicious ones that continue to expand in number and keep evolving in sophistication. These bad bots try to take over your users' accounts, scrape your content and pricing, abuse your payment pages and manipulate your inventory. In addition to being security threats, they can also significantly affect operational costs and skew your traffic data.

Mitigate Automated Threats

PerimeterX Bot Defender is a behavior-based bot management solution that protects your web and mobile applications and APIs from automated attacks, safeguarding your online revenue, competitive edge and brand reputation.

“PerimeterX is the best fit for companies that interact with users across multiple channels - web, mobile and API.”

The Forrester New Wave™: Bot Management, Q1 2020

Bot Defender Use Cases

Account Takeover (ATO)

Web Scraping

Skewed Analytics

Carding

Denial of Inventory

Benefits to Your Digital Business

Reduce Risk and Achieve Compliance

Maintain your brand reputation, avoid costs associated with bot-related security issues, and increase your users' confidence and trust by stopping bot attacks.

Protect Your Online Revenue

Increase your customer loyalty, maintain your competitive edge, protect your SEO ranking and make better business decisions by effectively blocking malicious bots on your websites, mobile applications and APIs.

Improve Operational Efficiency

Enable your team to focus on innovation and growth and save on resource consumption by blocking unwanted bot traffic at the edge and optimizing the use and performance of your web infrastructure.

The PerimeterX Difference

Easy to Deploy and Integrate Anywhere

Over 40 pre-built integrations support a wide range of content delivery networks (CDNs), load balancers, web servers and application servers. No website architecture changes required.

Extensible Platform

Single JavaScript sensor protects your website against multiple security threats from malicious bots to unauthorized third-party code changes and ad injections on the client-side.

Performance at Scale

Ensure quick response times and a positive experience for your users with an asynchronous and out-of-band detection architecture combined with the extremely low false-positive rates.

Analytics and Reporting

Advanced investigation, analysis and reporting capabilities with ability to customize dashboards, parameters and policies according to your business needs.

Key Integrations

Edge Integration(CDN, Cloud)				
Application SDK/ Middleware
